Answers 2 (Searching algorithms - 3 points)

1. Linear search regardless of element order: $\square$
2. Linear search taking into account the element order: $\square$
3. Binary search: $\square$

## Answers 3 (See Syracuse - 3 points)

## Specifications:

The function syracuse ( $n$ ) builds the list $L$ of all the Syracuse sequence numbers from $n$ if $n \geq 1$. Otherwise, it returns an empty list.

Answers 4 (Arithmetic progression -4 points)

## Specifications:

The function arithmetic ( $L$ ) tests whether the list $L$ has at least two elements and follows an arithmetic progression. In this case, it returns the common difference, otherwise it returns 0 .

## Answers 5 (Deletion in sorted list - 5 points)

## Specifications:

The function delete $(L, x)$ removes the value $x$, if it exists, from the list $L$ sorted in strictly increasing order and returns a boolean that indicates whether the deletion occurred.

## Answers 6 (What is it? - 3 points)

1. Result of the following application of what:
```
>>> what ([1,3,2,8,7,2,5,4,0,6,2,15])
*
```

2. We call what ( $L$ ) with $L$ a list of natural numbers.
(a) At the end of the first loop, what does me represent?
$\qquad$
$\qquad$
(b) At the end of the third loop, what does X represent?
$\qquad$
$\qquad$
(c) What does this function returns?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
3. Bonus: What is the complexity of this function?
