Key to Final Exam S3
Computer Architecture

Duration: 1 hr 30 min

Write answers only on the answer sheet.

Exercise 1 (4 points)

Complete the table shown on the answer sheet. Write down the new values of the registers (except the **PC**) and memory that are modified by the instructions. **Use the hexadecimal representation. Memory and registers are reset to their initial values for each instruction.**

Initial values:

```
D0 = $FFFF0020  A0 = $00005000  PC = $00006000
D1 = $12340004  A1 = $00005008
D2 = $FFFFFFF7  A2 = $00005010

$005000  54 AF 18 B9 E7 21 48 C0
$005008  C9 10 11 C8 D4 36 1F 88
$005010  13 79 01 80 42 1A 2D 49
```

Exercise 2 (3 points)

Complete the table shown on the answer sheet. Give the result of the additions and the values of the **N**, **Z**, **V** and **C** flags.

Exercise 3 (4 points)

Let us consider the following program. Complete the table shown on the answer sheet.

```
Main        move.l  #$5A9500,d7

next1       moveq.l #1,d1
            tst.b   d7
            beq     next2
            moveq.l #2,d1

next2       moveq.l #1,d2
            cmpi.w  #$95,d7
            bgt     next3
            moveq.l #2,d2

next3       clr.l   d3
            move.l  #$512,d0
loop3       addq.l  #1,d3
            subq.b  #1,d0
            bne     loop3

next4       clr.l   d4
            move.l  #64,d0
loop4       addq.l  #1,d4
            dbra    d0,loop4        ; DBRA = DBF

quit        illegal
```

Exercise 4 (9 points)

All the questions in this exercise are independent. **Except for the output registers, none of the data or address registers must be modified when the subroutine returns.** For the whole exercise, a pair of ASCII characters is made up of two characters representing an integer between 0 and 99 (in base 10). For instance, the characters "08" ('0' and '8') represent the value 8; and the characters "42" ('4' and '2') represent the value 42. As a reminder, the ASCII code of the '0' character is equal to $30.

Be careful. All the subroutines must contain 15 lines of instructions at the most.

1. Write the **`ToAscii`** subroutine that converts an integer into a pair of ASCII characters.
   Input: **D0.L** holds an integer between 0 and 99 (in base 10).
   A0.L points to a 2-byte buffer where the pair of ASCII characters must be written.

   Example: If **D0** = $0000002A (42 in base 10) and **A0.L** = $00005000, then the address $5000 will hold the value $34 (ASCII code of '4') and the address $5001 will hold the value $32 (ASCII code of '2').

2. Write the **`ToInt`** subroutine that converts a pair of ASCII characters into an integer.
   Input: **A0.L** points to a pair of ASCII characters to convert.
   Output: **D0.B** holds the integer that is represented by the pair of ASCII characters.
   Be careful, only **D0.B** must be modified (bits from 8 to 31 must not be modified).

   Example:

```
Main        movea.l #ascii,a0
            jsr     ToInt           ; D0.B = $2A (42 in base 10)
            illegal

ascii       dc.b    "42"
```

3. By using the **`ToInt`** subroutine, write the **`GetSum`** subroutine that returns the sum of two pairs of ASCII characters.
   Input: **A0.L** points to a first pair of ASCII characters.
   A1.L points to a second pair of ASCII characters.
   Output: **D0.B** holds an integer that is the sum of the two pairs of ASCII characters.
   Be careful, only **D0.B** must be modified (bits from 8 to 31 must not be modified).

   Example:

```
Main        movea.l #ascii1,a0
            movea.l #ascii2,a1
            jsr     GetSum          ; D0.B = $32 (50 in base 10)
            illegal

ascii1      dc.b    "42"
ascii2      dc.b    "08"
```

NE	not equal	!Z	GT	greater than	![(N ⊕ V) + Z]
EQ	equal	Z	LE	less or equal	(N ⊕ V) + Z

An Address register (16/32-bit, n=0-7)
Dn Data register (8/16/32-bit, n=0-7)
Rn any data or address register
s Source, **d** Destination
e Either source or destination
#n Immediate data, **i** Displacement
BCD Binary Coded Decimal
↑ Effective address

1 Long only; all others are byte only
2 Assembler calculates offset
3 Branch sizes: **.B** or **.S** -128 to +127 bytes, **.W** or **.L** -32768 to +32767 bytes
4 Assembler automatically uses A, I, Q or M form if possible. Use #n.L to prevent Quick optimization

SSP Supervisor Stack Pointer (32-bit)
USP User Stack Pointer (32-bit)
SP Active Stack Pointer (same as A7)
PC Program Counter (24-bit)

SR Status Register (16-bit)
CCR Condition Code Register (lower 8-bits of SR)
N negative, **Z** zero, **V** overflow, **C** carry, **X** extend
* set according to operation's result, = set directly
- not affected, **0** cleared, **1** set, **U** undefined

ANSWER SHEET TO BE HANDED IN

Exercise 1

Instruction	Memory	Register
Example	`$005000  54 AF 00 40 E7 21 48 C0`	A0 = `$00005004` A1 = `$0000500C`
Example	`$005008  C9 10 11 C8 D4 36 FF 88`	No change
`MOVE.W #5000,-4(A2)`	`$005008  C9 10 11 C8 13 88 1F 88`	No change
`MOVE.L $500A,-(A2)`	`$005008  C9 10 11 C8 11 C8 D4 36`	A2 = `$0000500C`
`MOVE.B 1(A0),-7(A1,D1.W)`	`$005000  54 AF 18 B9 E7 AF 48 C0`	No change
`MOVE.L -12(A2),$13(A1,D2.W)`	`$005010  13 79 E7 21 48 C0 2D 49`	No change

Exercise 2

Operation	Size (bits)	Result (hexadecimal)	N	Z	V	C
`$42 + $2A`	8	`$6C`	0	0	0	0
`$7FF0 + $11`	16	`$8001`	1	0	1	0
`$FFFFFFF0 + $11`	32	`$00000001`	0	0	0	1

Exercise 3

Values of registers after the execution of the program. **Use the 32-bit hexadecimal representation.**	
D1 = $00000001	**D3** = $00000012
D2 = $00000002	**D4** = $00000041

Exercise 4

```
ToAscii     move.l  d0,-(a7)

            divu.w  #10,d0
            addi.l  #$00300030,d0

            move.b  d0,(a0)
            swap    d0
            move.b  d0,1(a0)

            move.l  (a7)+,d0
            rts
```

```
ToInt       move.l  d1,-(a7)

            clr.w   d1

            move.b  (a0),d1
            move.b  1(a0),d0

            sub.b   #'0',d1
            sub.b   #'0',d0

            mulu.w  #10,d1
            add.b   d1,d0

            move.l  (a7)+,d1
            rts
```

```
GetSum      movem.l d1/a0,-(a7)

            jsr     ToInt
            move.b  d0,d1

            movea.l a1,a0
            jsr     ToInt
            add.b   d1,d0

            movem.l (a7)+,d1/a0
            rts
```
