

# Final exam 1

Duration : three hours  
Documents and calculators not allowed

Name :

First name :

Class :

## Exercise 1 (5 points)

- Using d'Alembert's test, determine the nature of the series  $\sum \frac{(n!)^2}{(3n)!}$ .

- Let  $k \in \mathbb{N}^*$ . Using d'Alembert's test, determine, depending on  $k$ , the nature of the series  $\sum \frac{(n!)^2}{(kn)!}$ .

[this frame continues on next page]

3. Let  $a \in \mathbb{R}$ . Using Cauchy's test, determine, depending on  $a$ , the nature of the series  $\sum \left( \frac{n}{n+a} \right)^{n^2}$ .

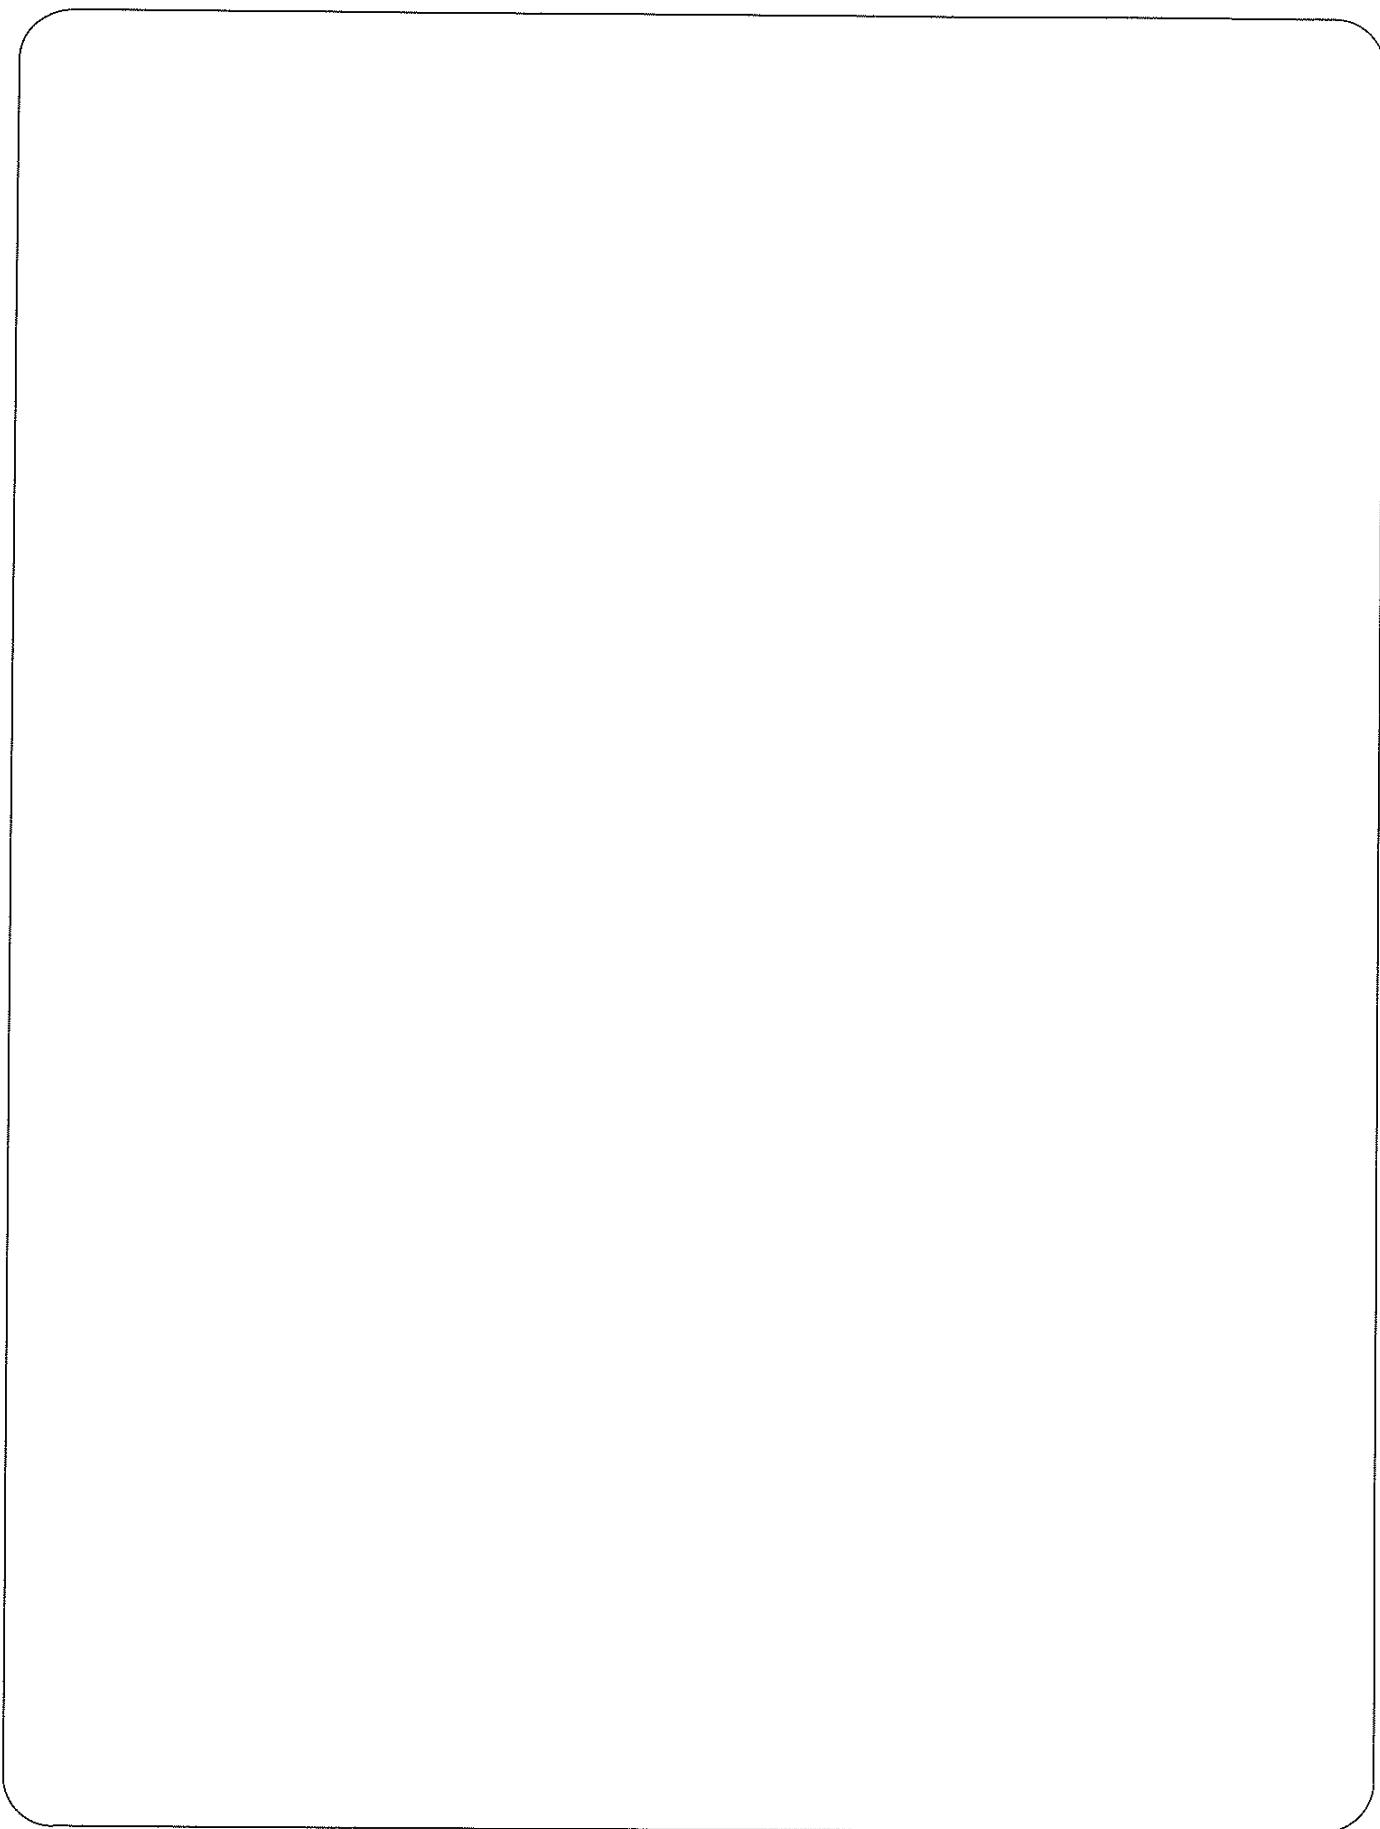

**Exercise 2 (4 points)**

Let  $A = \begin{pmatrix} 0 & 3 & 0 \\ 1 & -2 & 4 \\ 1 & 1 & 1 \end{pmatrix}$  and  $B = \begin{pmatrix} 0 & -1 & 0 \\ 1 & 2 & -4 \\ 1 & 1 & -3 \end{pmatrix}$ .

Are  $A$  and  $B$  diagonalizable in  $\mathcal{M}_3(\mathbb{R})$ ? If they are, determine  $D$  and  $P$ .

N.B. : the bases of the eigenspaces must be deduced from a clear reasoning, and not by randomly picking particular values.

[this frame continues on next page]

**Exercise 3 (4 points)**

Let  $a \in \mathbb{R}$  and  $A = \begin{pmatrix} -3 & 1 & 0 \\ a-3 & 0 & 1-a \\ -1 & 1 & -2 \end{pmatrix}$ . Study the diagonalizability of  $A$  in  $\mathcal{M}_3(\mathbb{R})$  depending on the value of  $a$ .

N.B. : when  $A$  is diagonalizable, the eigenbasis is not required.

### Exercise 4 (4 points)

1. Let  $f : \begin{cases} \mathbb{R}_3[X] & \longrightarrow \mathbb{R}_3[X] \\ P(X) & \longmapsto 3XP(X) - (X^2 - 1)P'(X) \end{cases}$ .

- a. Determine (no need to justify) the matrix of  $f$  in the standard basis  $\mathcal{B} = (1, X, X^2, X^3)$  of  $\mathbb{R}_3[X]$ .

- b. Is  $f$  bijective? Justify your answer.

2. Let  $A = \begin{pmatrix} a & b \\ c & d \end{pmatrix} \in \mathcal{M}_2(\mathbb{R})$  and  $f : \begin{cases} \mathcal{M}_2(\mathbb{R}) \rightarrow \mathcal{M}_2(\mathbb{R}) \\ X \mapsto AX - XA \end{cases}$ . Determine (no need to justify) the matrix of  $f$  in the standard basis  $\mathcal{B} = (E_{11} = \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix}, E_{12} = \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix}, E_{21} = \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix}, E_{22} = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix})$  of  $\mathcal{M}_2(\mathbb{R})$ .

### Exercise 5 (4 points)

Let  $(a, b, c, d, e, f) \in \mathbb{R}^6$  and  $A = \begin{pmatrix} 1 & a & b & c \\ 0 & 2 & d & e \\ 0 & 0 & 2 & f \\ 0 & 0 & 0 & 2 \end{pmatrix}$ .

Study the diagonalizability of  $A$  depending on the values of  $a, b, c, d, e$  and  $f$ .

When  $A$  is diagonalizable, the eigenbasis is not required.
